Supplier Resilience Improvement

Supplier Resilience Improvement

The importance of supplier resilience has been highlighted by recent global and economic events. Businesses need to be able to adapt to a rapidly changing environment where previous assumptions about supply chain resilience are no longer valid.

SMEs are especially vulnerable when there are fluctuations or shocks that affect their own capability and capacity, and that of their suppliers, to meet their commitments. Similarly, SMEs need to be able to adapt to their customers' supply chain resilience challenges, which may affect the timing and value of product and service delivery.

These can be addressed by understanding the key factors that affect supplier resilience and how they can best be managed in a new business environment. This means increasing your own business capability to manage supply chain resilience on a long-term basis, making it business as usual.

Objectives

To give participants an overall knowledge and awareness of the issues associated with supplier resilience.

To increase your capability to manage supplier resilience.

Learning Outcomes

Identify the key factors affecting supplier resilience.

Know how to map business resilience.

Identify business resilience risks and mitigations.

Understand how to increase supplier resilience.

Understand how to collaborate with customers and your supply chain to increase resilience.

Who Should Attend?

Programmes can be tailored for the following areas within a business:

- Business Management
- Commercial
- Procurement
- Manufacturing
- Operations Management

Course Structure

The one-day course is suitable for 4-12 people and can be provided to the client organisation in-house or at an external venue (in which case room hire/catering costs will apply).

The cost is £300 + VAT per delegate.
